CAREER OBJECTIVE

I aspire to be associated with a progressive pharmaceutical company, which provides the necessary opportunities and ample scope to exhibit my skills in the domain of synthetic organic chemistry, polymer chemistry, lipid chemistry, carbohydrate chemistry, and asymmetric catalysis.

RESEARCH EXPERIENCE

Sept. 2022– Present	**Researcher** at Department of Chemistry and Biochemistry, **Mendel University**, Brno & Faculty of Chemical Technology, University of Pardubice, **Czech Republic**.
April 2018– Aug. 2022	**Postdoctoral Researcher** at Department of Infectious Diseases and Preventive Medicine, Veterinary Research Institute, Brno & Faculty of Chemical Technology, University of Pardubice, **Czech Republic**.
Nov. 2011– Aug. 2017	**Ph.D.** (**Organic Chemistry**) in Institute of Organic Chemistry and Technology, Faculty of Chemical Technology, University of Pardubice, **Czech Republic**.
Sept. 2010 – Sept. 2011	**Project Assistant** in National Chemical Laboratory, Division of Organic Chemistry, Pune, **India**. During this period, I have worked on the "*Development of novel antifungal agents including hybrid molecules*", under the supervision of **Dr. Hanumant B. Borate** (Sci-F).
Aug. 2009 – Aug. 2010	**Research Training** in Department of Chemistry, Deogiri College, Aurangabad, **India**. During this period, I have worked on "*Synthesis of β-enamino ketone using sulfated tin oxide (STO) development of novel synthetic methods using nanoparticles as a catalyst*", under the supervision of **Prof. Dr. Rajendra P. Pawar**.
Feb. 2009 – Aug. 2009	**Research guest work** in National Chemical Laboratory, Division of Organic Chemistry, Pune, **India**. During this period, I have worked on "*Synthesis of biologically active molecules*", under the supervision of **Dr. Subhash P. Chavan** (Sci-G).

EDUCATIONAL QUALIFICATIONS

Nov. 2011– Aug. 2017	**Ph.D.** in **Organic Chemistry**, Institute of Organic Chemistry and Technology, Faculty of Chemical Technology, University of Pardubice, **Czech Republic**, under the supervisor **Prof. Ing. Miloš Sedlák DrSc**. Thesis title: "*Selected pyridine derivatives immobilized on colloidal nanosystems for asymmetric Henry reaction and drug delivery application*"
June 2006 – May 2008	**M.Sc.** in **Organic Chemistry** (61.92%), Department of Chemistry, Maharashtra Udaygiri Mahavidyalaya Udgir, affiliated to S. R. T. M. University Nanded, Maharashtra, **India**.
June 2003 – May 2006	**B.Sc.** in **Chemistry, Botany, Zoology** (68.57%), Department of Chemistry, Maharashtra Udaygiri Mahavidyalaya Udgir, affiliated to S. R. T. M. University Nanded, Maharashtra, **India**.

RESEARCH AREA AND TECHNICAL SKILLS

Laboratory:

Over 13-year's experience in multi-step organic synthesis involving asymmetric synthesis, heterocyclic chemistry, carbohydrate chemistry, peptide chemistry (block copolymer), lipid synthesis, Fe-based magnetic nanoparticles, asymmetric catalysis (homogeneous/ heterogeneous), organometallic, recycling the catalyst, and drug conjugates for smart pH-dependent drug delivery.

- Excellent skills in designing organic synthetic routes and synthesis of small to complex molecules. Experience in handling moisture-sensitive, and light-sensitive reagents, and reactions. Experience scale-up process development from mg to gm scale.
- Expertise in purification techniques: such as flash column chromatography, recrystallization, and distillation.
- Structure elucidation of small to complex organic molecules by advanced spectroscopic methods such as FT-IR, FT-NMR, LCMS and MALDI-TOF, GPC, HPLC, UV/vis, XRD, DLS, BET, SEM, and specific rotation.

Computer:

- Well versed with chemistry-related database search (Sci-finder, Reaxys), software like ISIS Draw, Chem. Draw.

Personal:

- Ability to work and contribute effectively to a collaborative team environment and handle multiple projects.
- Innovative, keen learner, and team player. Multi-tasking with high degree of accuracy and efficiency.

CONFERENCES AND POSTERS

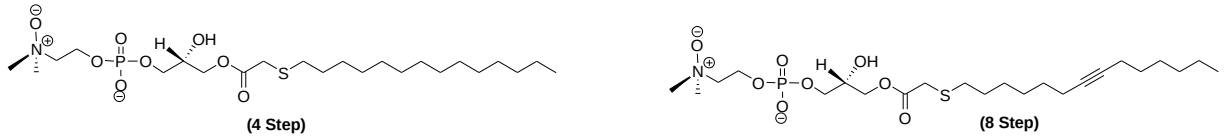
Research Summary

1. Postdoctoral Researcher at Department of Chemistry and Biochemistry, Mendel University, Brno & University of Pardubice, Czech Republic. [Sept. 2022 – Present]

The second postdoctoral researcher work was mainly concerned with the synthesis of targeted lipids. The completed lipids derivatives such as lyso-TTA-PC, lyso-*t*-TTA-PC (Figure **1**), lipid-C_{18}tAO-surfactant (Scheme **1**) and the functionalization of PEG polymer (Scheme **2**). The lipid-based nanoparticles (LNPs) are currently used in formulation and click chemistry application and in drug delivery application.



1) 1-[2-(Tetradecylthio)acetyl]-sn-glycero-3-phosphocholine (lyso-TTA-PC)

2) 1-[2-(Tetradec-[7-ynyl]thio)acetyl]-sn-glycero-3-phosphocholine (lyso-tTTA-PC)

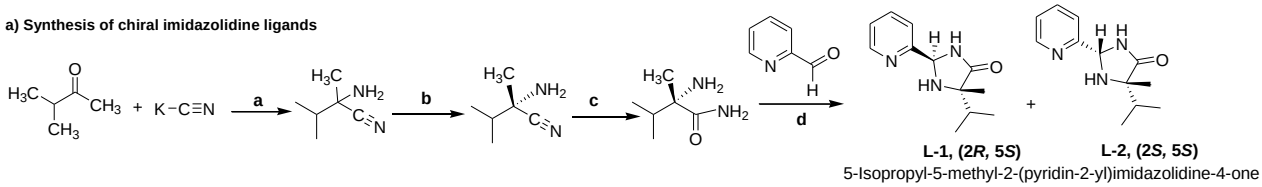
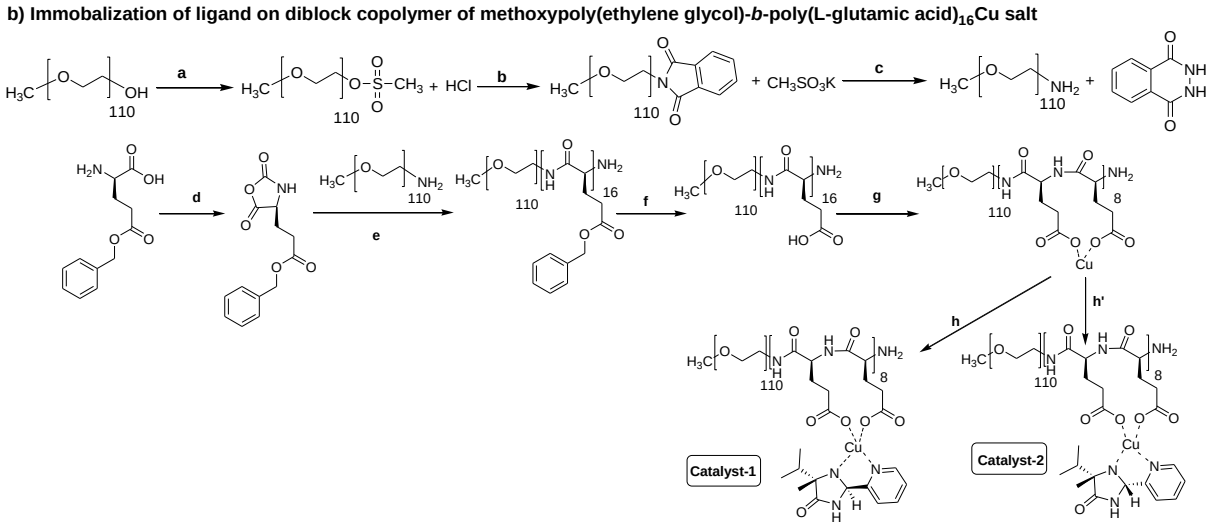
3. Doctoral (Ph.D.) study work at University of Pardubice, Czech Republic [Nov. 2011 – Aug. 2017]

In first part of study, I developed polymer supported version of **catalyst -1/2** (Scheme **9**). A synthetic route to (2*R*, 5*S*) or (2*S*, 5*S*)-5-isoprpyl-5-methyl-2(pyridine-2-yl)imdazolidne-4-one was achieved from readily available non chiral starting material methyl isopropyl ketone (Scheme **8**).



Scheme 8. Reagents and conditions: **a**) NH_3, CH_3COOH, 40 °C, 7 h; **b**) L-(+)-Tartaric acid, NaOH; **c**) H_2O, H_2SO_4; **d**) 2-Pyridinecarboxyaldehyde, CH_3OH, CH_3COOH, reflux, 7 h.

Henry reaction was performed by using a catalyst-**1**/**2** to obtain the corresponding (*R*)-2-nitroalcohols with high chemical yield (70–98%) and high enantioselectivity (61–92% ee) (Scheme **10**). The catalyst **1/2** was successfully recycled up to 10 catalytic cycles while retaining high yield and enantioselectivity.



Scheme 9. Reagents and conditions: **a**) CH_3SO_2Cl, 70 °C, 75 h; **b**) Potassium phthalimide, 70 °C, 96 h; **c**) $NH_2NH_2{\cdot}H_2O$, EtOH, reflux, 5 h; **d**) $COCl_2$, THF, 40 °C, 4 h; **e**) m-PEG-NH_2, DMF, 40 °C, 48 h; **f**) Pd/C, THF, 20 bar H_2, rt, 24 h; **g**) $CuCO_3$, H_2O, rt, 24 h; **h**) Ligand-1, EtOH, rt, 24 h; **h′**) Ligand-2, EtOH, rt, 24 h.

Publication: *Tetrahedron Asymmetry*, **2014**, *25*, 334-339. Highlighted in **SYNFACTS, 2014**, *10*(6), 0655.

In second part of study, I developed magnetically recoverable catalyst-**3** (Scheme **11**) for the asymmetric Henry reaction and obtained the corresponding (*R*)-2-nitroalcohols with high chemical yield (82–99%) and with high enantioselectivity (68–94% ee) (Scheme **12**). The MNPs supported catalytic systems were convenient route to recycle up to ten cycles through solid-phase separation.

Also, during my research work, I worked with Dr. Mohan K. Dongare, Catalysis Division, NCL. During this period, I worked on "*Synthesis of imidazoles by using MoO_3/SiO_2 an efficient and recyclable catalyst* "(Scheme **21**).
